ON THE RESOLUTION OF A PARABOLIC EQUATION IN A NONREGULAR DOMAIN OF $\mathbb{R}^3$

A. KHELOUFI, R. LABBAS AND B.-K. SADALLAH

Abstract. In this work we give new results of existence, uniqueness and maximal regularity of a solution to a parabolic equation set in a nonregular domain $Q$ with Cauchy-Dirichlet boundary conditions, where $Q = \{(t, x_1) \in \mathbb{R}^2 : 0 < t < T; \phi_1(t) < x_1 < \phi_2(t)\} \times [0, b] \subseteq \mathbb{R}^3$ with some assumptions on the functions $(\phi_i)_{i=1,2}$. The right-hand side term of the equation is taken in $L^2(Q)$. The method used is based on the approximation of the domain $Q$ by a sequence of subdomains $(Q_n)_n$ which can be transformed into regular domains. This work is an extension of the one space variable case studied in [12].

Keywords and phrases: parabolic equation, nonregular domains, anisotropic Sobolev space.
