

## EXISTENCE RESULTS FOR SOME NONLOCAL PROBLEMS

PROSENJIT ROY

*Abstract.* We consider nonlocal elliptic boundary value problems of the form

$$-\operatorname{div}(\mathcal{A}(x, u)\nabla u) = \lambda f(u)$$

with Dirichlet boundary conditions where  $\mathcal{A}$  is a nonlocal function. We prove existence of nontrivial positive solutions if the graph of the non linear function  $f$  is of single positive loop type. Methods of approximation and Schauder fixed point theorem are the main tools to be used here.

*Mathematics subject classification (2010):* 47A10, 35H99.

*Keywords and phrases:* eigenvalue problem, nonlocal problems.
