

EXISTENCE OF SOLUTIONS TO NONLINEAR BOUNDARY VALUE PROBLEMS

JESÚS RODRÍGUEZ AND ADAM J. SUAREZ

Abstract. In this paper we provide sufficient conditions for the existence of solutions to nonlinear boundary value problems. We do so by applying a general abstract strategy for solving nonlinear equations with a linear component. We apply this to general systems by first isolating a linear periodic system and using the general theory of periodic solutions to find conditions on the additional nonlinear components to guarantee solutions.

Mathematics subject classification (2010): 34A34, 34B15, 47J07, 47H09, 47H10.

Keywords and phrases: ordinary differential equations, nonlinear equations, periodic solutions.
