

## NONLINEAR MODEL OF QUASI-STATIONARY PROCESS IN CRYSTALLINE SEMICONDUCTOR

B. JUAREZ-CAMPOS, ELENA KAIKINA AND HECTOR F. RUIZ-PAREDES

*Abstract.* We consider the question of global existence and asymptotics of small, smooth, and localized solutions of a certain pseudoparabolic equation in one dimension, posed on half-line  $x > 0$ ,

$$\begin{cases} (1 - \partial_x^2) u_t = \partial_x^2 (u + \alpha_2 (|u|^{q_2} u)) + \alpha_1 |u|^{q_1} u, & x \in \mathbb{R}^+, t > 0, \\ u(0, x) = u_0(x), & x \in \mathbb{R}^+, \\ u(0, t) = h(t), \end{cases} \quad (0.1)$$

where  $\alpha_i \in \mathbb{R}, q_i > 0, i = 1, 2, u : \mathbb{R}_x^+ \times \mathbb{R}_t^+ \in \mathbb{C}$ . This model is motivated by the a wave equation for media with a strong spatial dispersion, which appear in the nonlinear theory of the quasy-stationary processes in the electric media. We show that the problem (0.1) admits global solutions whose long-time behavior depend on boundary data. More precisely, we prove global existence and modified by boundary scattering of solutions.

*Mathematics subject classification (2010):* 35Q35, 35B40.

*Keywords and phrases:* nonlinear pseudoparabolic equation, initial -boundary value problem, global-in-time analysis, asymptotics of solutions.
