

CHARACTERIZATION OF A CLASS OF SECOND ORDER NEUTRAL IMPULSIVE SYSTEMS VIA PULSATILE CONSTANT

A. K. TRIPATHY AND S. S. SANTRA

Abstract. In this work, we study the oscillation and nonoscillation properties of a class of second order neutral impulsive differential equations with constant coefficients and constant delays by using pulsatile constant. Also, an attempt is made to extend the constant coefficient results to variable coefficient equations.

Mathematics subject classification (2010): 34K11, 34K40.

Keywords and phrases: Oscillation, nonoscillation, neutral delay differential equations, impulse.
