NONLINEAR DYNAMIC EQUATIONS ON TIME SCALES
WITH IMPULSES AND NONLOCAL CONDITIONS

SANKET TIKARE* AND CHRISTOPHER C. TISDELL

Abstract. The purpose of this paper is to introduce more general results on the existence of solutions for nonlinear dynamic equations on time scales with impulses and nonlocal initial conditions. We establish the existence of solutions by applying a fixed point result due to O’Regan, while the uniqueness of solutions is obtained through the contraction mapping principle. Our results extend previous work in the literature and an example is discussed to illustrate the obtained results.

Keywords and phrases: Existence of solutions, impulsive dynamic equations, fixed point theorem, nonlocal initial conditions.
