

## A NOTE ON A SUBCLASS OF ANALYTIC FUNCTIONS DEFINED BY RUSCHEWEYH DERIVATIVE

ALINA ALB LUPAŞ AND ADRIANA CĂTAŞ

*Abstract.* By means of the Ruscheweyh derivative we define a new class  $\mathcal{B}\mathcal{R}_n(m, \mu, \alpha)$  involving functions  $f \in \mathcal{A}_n$ . Parallel results, for some related classes including the class of starlike and convex functions respectively, are also obtained.

*Mathematics subject classification* (2010): 30C45.

*Keywords and phrases:* analytic function, starlike function, convex function, Ruscheweyh derivative.
