ON THE ROLE OF ULTRAMODULARITY AND SCHUR CONCAVITY IN THE CONSTRUCTION OF BINARY COPULAS

ERICH PETER KLEMENT, ANNA KOLESÁROVÁ, RADKO MESIAR AND SUSANNE SAMINGER-PLATZ

Abstract. We discuss and stress the role of ultramodularity and Schur concavity in special types of constructions of copulas. After recalling some known ultramodularity-based results, we focus on the so-called $D$-product of a copula and its dual. We show that for each copula $D$ which is ultramodular and Schur concave on the left upper triangle of the unit square, this $D$-product of an arbitrary copula and its dual is again a copula. Several examples and counterexamples are given. Finally, some of our results are generalized to the case of semicopulas and quasi-copulas.

Keywords and phrases: Copula, quasi-copula, semicopula, Schur concave copula, ultramodular copula.
