

ZEROS OF CERTAIN TRINOMIAL EQUATIONS

YOUNG JOON AHN AND SEON-HONG KIM

Abstract. We begin by studying the zero distribution of the trinomial equation $bz^n - az^m + a - b = 0$, where $b > a > 0$ are real and $n > m > 0$ are integers. And we study the location of zeros of more general class of trinomial equations $(t - 2)z^n + (t - 1)z - s = 0$, where $t > 2$ and $s > 0$.

Mathematics subject classification (2000): 26C10, 30C15.

Key words and phrases: zeros, polynomials, trinomial equations.
