

REMARKS ON A PYTHAGOREAN APPROACH IN BANACH SPACES

Ji GAO AND SATIT SAEJUNG

Abstract. We give relations between the parameters $E(X)$ and $f(X)$, introduced by the first author in [4], and other geometric constants. Main results in [4] and [5] are derived and strengthened. More precisely, a wider class of Banach spaces with uniform normal structure is obtained. A relation between $E(X)$ and $E(X^*)$ is also given.

Mathematics subject classification (2000): 46B20, 46B25.

Key words and phrases: uniform normal structure, uniformly nonsquare space.
