ON THE RATIO BETWEEN SUCCESSIVE RADII OF A SYMMETRIC CONVEX BODY

BERNARDO GONZÁLEZ MERINO

Abstract. In this note we study the upper bound for the ratio between the so called successive inner and outer radii of a 0-symmetric convex body \( K \). This problem was studied by Perel’man and Pukhov and it is a natural generalization of the classical results of Jung and Steinhagen.

Mathematics subject classification (2010): Primary 52A20; Secondary 52A40.

Keywords and phrases: Inner and outer radii, Perel’man-Pukhov problem.
