

ON INEQUALITY $R_p < R$ OF THE PEDAL TRIANGLE

JIAN LIU

Abstract. In this paper we give a simple proof of the pedal triangle inequality $R_p < R$, where R is the circumradius of a triangle and R_p is the circumradius of the pedal triangle of an interior point with respect to this triangle. We also establish a stronger result and a refinement of inequality $R_p < R$. Some related interesting conjectures checked by the computer are put forward.

Mathematics subject classification (2010): 51M16.

Keywords and phrases: Triangle, interior point, transformation, conjecture.
