DUAL COMPLEMENTS FOR DOMAINS OF $\mathbb{C}^n$

LEV AIZENBERG, ELIJAH LIFLYAND AND ALEŠ NEKVINDA

Abstract. Let $\Omega \subset \mathbb{C}^n$ be a bounded, strictly convex domain and $\tilde{\Omega}$ be its dual complement. Very few such domains with fully described dual complements have been known. We present new types of domains for which their dual complements can be completely described.

Keywords and phrases: Grothendieck-Köthe-da Silva duality, Reinhardt domain, Reinhardt norm, dual complement, variable Lebesgue space, Orlicz space.
