

UNITARY EQUIVALENCE TO A COMPLEX SYMMETRIC MATRIX: GEOMETRIC CRITERIA

LEVON BALAYAN AND STEPHAN RAMON GARCIA

Abstract. We develop several methods, based on the geometric relationship between the eigenspaces of a matrix and its adjoint, for determining whether a square matrix having distinct eigenvalues is unitarily equivalent to a complex symmetric matrix. Equivalently, we characterize those matrices having distinct eigenvalues which lie in the unitary orbit of the complex symmetric matrices.

Mathematics subject classification (2000): 15A57, 47A30.

Keywords and phrases: Complex symmetric matrix, complex symmetric operator, unitary equivalence, unitary orbit, UECSM.
