SPECTRA OF LAPLACIANS ON FORMS ON AN INFINITE GRAPH

HÈLA AYADI

Abstract. In the context of infinite weighted graphs, we consider the discrete Laplacians on 0-forms and 1-forms. Using Weyl’s criterion, we prove the relation between the nonzero spectrum of $\Delta_0$ and that of $\Delta_1$. Moreover, we give an extension of the work of John Lott to characterize the 0-spectrum of these two Laplacians.
