

ERRATUM TO “A SURJECTIVITY PROBLEM FOR 3 BY 3 MATRICES, OPERATOR AND MATRICES, 13, NO. 1, (2019) 111—119”

CONSTANTIN BUŞE, DONAL O’REGAN* AND OLIVIA SAIERLI

Abstract. Let P be a complex polynomial. We prove that the associated polynomial matrix-valued function \tilde{P} is surjective if for each $\lambda \in \mathbb{C}$ the polynomial $P - \lambda$ has at least a simple zero and it is not surjective if it does not have the double zero property.

Mathematics subject classification (2020): 30C15, 33C50, 15A60, 65F15.

Keywords and phrases: natural powers of matrices, functional calculus with matrices, global problems concerning polynomials of matrices.
