

## APPROXIMATION OF FUNCTIONS BY GENUINE BERNSTEIN–DURRMAYER TYPE OPERATORS

TUNCER ACAR, ANA MARIA ACU AND NESIBE MANAV

**Abstract.** Very recently, in [4] Chen et. al introduced and considered a new generalization of Bernstein polynomials depending on a parameter  $\alpha$ . As classical Bernstein operators, these operators also provide interpolation at the end points of  $[0, 1]$  and they have the linear precision property which means those reproduce the linear functions. In this paper we introduce genuine  $\alpha$ -Bernstein-Durrmeyer operators. Some approximation results, which include local approximation, error estimation in terms of Ditzian-Totik modulus of smoothness are obtained. Also, the convergence of these operators to certain functions is shown by illustrative graphics using MAPLE algorithms.

*Mathematics subject classification (2010):* 41A10, 41A25, 41A36.

*Keywords and phrases:* Genuine Bernstein-Durrmeyer operators, rate of convergence, linear positive operators.
