

APPROXIMATION PROPERTIES OF (p, q) -GAMMA OPERATORS

WENTAO CHENG, WENHUI ZHANG AND AXIU SHU

Abstract. In this paper, we introduce a new analogue of Gamma operators and we call it as (p, q) -Gamma operators which is a generalization of q -Gamma operators. Moments of these operators is estimated. And some other results of these operators are studied by means of modulus of continuity and Peetre K -functional. Then, some theorems concerned with the rate of convergence and the weighted approximation for these operators are also obtained. Finally, a Voronovskaya asymptotic formula is also presented.

Mathematics subject classification (2010): 41A36, 41A25, 41A10.

Keywords and phrases: (p, q) -Gamma operators, weighted approximation, rate of convergence, modulus of continuity.
