

ON SOME GENERALIZED INVERSES OF M_V -MATRICES

MANIDEEPA SAHA

Abstract. In this paper we study a class of generalized M -matrices known as M_V -matrices. An M_V -matrix has the form $A = sI - B$, with $s \geq \rho(B)$ and B eventually nonnegative. An attempt is made to characterize M_V -matrices, by extending the results of Neumann and Plemmons for M -matrices. In particular, we characterize two different subclasses of M_V -matrices in terms of various types of generalized inverses.

Mathematics subject classification (2020): 5A09, 15A18, 15B48.

Keywords and phrases: Eventually nonnegative, eventually positive, eventually monotone, Perron-Frobenius property, generalized inverse.
