ON THE ABC SPECTRAL RADIUS OF CACTUS GRAPHS

ZHIBIN DU AND BO ZHOU

Abstract. Let $G$ be a graph with vertex set $V(G)$. Denote by $d_u$ the degree of vertex $u$ in $G$. The ABC matrix of $G$, proposed by Estrada, is the matrix $(ABC_{uv})_{u,v \in V(G)}$, where $ABC_{uv} = \sqrt{d_u + d_v - 2d_ud_v}$ if $u$ and $v$ are adjacent, and 0 otherwise. The ABC spectral radius of $G$ is the largest eigenvalue of the ABC matrix of $G$. In this paper, we determine the unique cactus graph with the largest ABC spectral radius among all cactus graphs with fixed order and number of cycles, and the cactus graphs of order $n$ with the first a few largest ABC spectral radii for $n \geq 4$.
